

Technology Lesson

I used Google Presentation for my technology lesson. This lesson had the students create a project collaboratively over Greek Gods. The students worked together creating a Google Presentation and then presented their projects to the class sharing the information. Best part of the lesson was that the students were not only just creating a presentation; they researched and learned many important functions of computer itself.

- Google Presentation is a Google App located on the Google Drive.
 - It is imperative the students share the presentation with one another so they can work on it together
 - In order share, one student must create the project and then share it with their peers
 - Once the project is shared everyone can work on it at once
 - Once the project is created, they can present it to the class or even share with other classmates in order to spread information with one another.
