Using QR code as a Journey
- Download QR Reader apps on Ipad or Iphone or other device
- Go to https://www.the-qrcode-generator.com/
- Generate a "text" code with your information
- Save QR code and print- ensure that entire code is being printed
- Hang QR codes wherever you want them and have students scan for required information

Great uses
- Anything that has a sort of timeline
- Anything you want the students to search information for
- Gets students up and moving
- Students enjoy being privy to the "secret" information provided

Example
- Students did a project where they must complete Odysseus' journey
- Each location he went to had a separate QR code posted around school
- Students had to take the IPAD around school and find the message hidden at bottom so I knew they completed the journey
