Technology lesson third semester

Third Semester:

It is important to note that I participate in Mauger's Maker Space. I attended before school meeting and provided projects the students could make on Maker Space Festival. I source the materials, provided samples and did outside shopping for the event.

In regard to the third semester technology lesson at the High School, the students continued with Powerpoints and Google classroom during the course of the projects. Some of the projects include a Webquest. One example of a Webquest is a following:

Procedure:

The students were required to find a picture of mixed media artwork. Certain phrases were presented to them such as mixed media paper, or mixed media paint. Next the students viewed different samples of mixed media. This process took them about 15 to 20 minutes as I circulated around them watching source them many images. They printed in black and white a picture of the mixed media image they choose to share with the class. Listed beside the images was a list of materials. Students place the samples on the table and shared the artwork with their classmates. Students opened their sketchbooks and design two rough proposals. I conferenced with each student as to why they choose the image in the Webquest task and discuss their proposals. After the discussion they started to create their projects.
